Abstracts

Cell dissociation reagents are enzymatic or non-enzymatic solutions designed to detach adherent cells from culture surfaces?such as flasks, plates, or bioreactors?without compromising cell viability or functionality, thereby enabling downstream applications like subculturing, cell-based assays, or regenerative medicine. These reagents are critical in biomedical research, pharmaceutical development, and biomanufacturing, where precise and reproducible cell harvesting is essential. Key formulations include proteolytic enzymes (e.g., trypsin, collagenase), chelating agents (e.g., EDTA), and enzyme blends optimized for specific cell types, with growing emphasis on serum-free, xeno-free, and gentle alternatives to maintain cell integrity and experimental consistency.

The global Cell Dissociation Reagent market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
