Abstracts

Cell expansion media are nutrient-rich culture solutions specifically formulated to support the growth, proliferation, and viability of cells outside their natural environment. They contain a balanced mixture of essential components such as amino acids, vitamins, minerals, glucose, salts, growth factors, and buffering agents, which collectively provide the optimal physiological conditions required for cell division and metabolic activity. Depending on the application, they may be serum-containing, serum-free, or chemically defined to ensure consistency, safety, and scalability. Cell expansion media are specialized culture formulations designed to support the growth, proliferation, and maintenance of various cell types, including stem cells, immune cells, and primary cells. They provide essential nutrients, growth factors, and supplements necessary for cell metabolism and division, playing a critical role in biopharmaceutical production, regenerative medicine, and cell-based research.
