Report Overview

A cell smear centrifuge is a laboratory instrument used to separate and concentrate cells from a liquid sample. It works by spinning the sample at high speeds, causing the heavier cells to settle at the bottom of the tube while the lighter components remain in the supernatant. This allows for the isolation and analysis of the cells in the sediment. Cell smear centrifuges are commonly used in medical and research laboratories for various applications, such as preparing cell smears for microscopic examination or isolating specific cell types for further analysis.
