Abstracts

The cell soldering stringer is a specialized piece of photovoltaic manufacturing equipment used to automatically interconnect solar cells into strings by applying solder-coated copper ribbons (tabbing and bus ribbons) to the cell surfaces, creating electrical pathways that form the basis of solar modules. It ensures precise alignment, consistent soldering temperature, and high throughput, which are critical for maintaining cell efficiency, mechanical integrity, and long-term reliability in solar panels. Advanced models may incorporate vision systems for quality inspection, infrared heating for reduced thermal stress, and compatibility with various cell technologies such as PERC, TOPCon, or heterojunction. The equipment plays a vital role in scaling production while minimizing breakage and resistive losses, directly impacting module performance and manufacturing yield.

The global Cell Soldering Stringer market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
