Abstracts

Cell therapy bioprocessing refers to the integrated set of manufacturing and analytical procedures required to produce, expand, purify, characterize, and formulate living cells for therapeutic use, encompassing both autologous (patient-specific) and allogeneic (off-the-shelf) therapies, and involving technologies such as cell isolation, culture, genetic modification, cryopreservation, and quality control to ensure product safety, potency, and consistency in compliance with regulatory standards. The global market for cell therapy bioprocessing is expanding rapidly, driven by increasing approvals of advanced therapies, rising investment in regenerative medicine, and growing prevalence of chronic diseases such as cancer and cardiovascular disorders. Key market segments include equipment (bioreactors, centrifuges, and fill-finish systems), consumables (media, reagents, and single-use disposables), and software for process automation and data management. North America currently dominates the market due to strong regulatory frameworks, high R&D expenditure, and the presence of leading pharmaceutical and biotechnology companies; however, Asia-Pacific is emerging as a high-growth region, supported by government initiatives, expanding clinical trial activities, and growing manufacturing outsourcing. Major challenges include high production costs, complex supply chain logistics?particularly for autologous therapies?and stringent regulatory requirements, though advancements in scalable technologies, automation, and allogeneic platforms are helping to address these barriers. Competitive dynamics feature a mix of established life science tool providers, specialized bioprocessing companies, and contract development and manufacturing organizations (CDMOs) increasingly focusing on integrated solutions to support the transition from clinical-scale to commercial-scale production.

The global Cell Therapy Bioprocessing market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

5.20% during the forecast period.
