Abstracts

A cell therapy platform refers to a comprehensive system built around the research, development, production, and clinical translation of cell-based therapeutic products (such as CAR-T, TCR-T, NK cells, and stem cells). It includes the technical and equipment support for the entire process, from cell source acquisition, isolation and purification, gene editing, expansion and culture, quality control, cryopreservation and transportation, to clinical drug delivery. This platform improves the safety, consistency, and scalable production capabilities of cell therapy through standardized, automated, and closed-loop process systems, accelerating the transition of cell therapy from the laboratory to clinical applications. The downstream of cell therapy platforms primarily serves hospitals and clinical departments, cell therapy companies, biopharmaceutical companies, and research institutions, and is applied to the clinical translation of cell preparations, personalized treatment implementation, outsourced process development, and support for large-scale clinical trials. Due to the high technical barriers, complex production systems, and stringent quality standards of cell therapy, platform services command a significant professional premium; therefore, downstream orders typically have high profit margins, with a general gross profit margin of around 56%. As the forefront of modern biomedical technology, the cell therapy platform is leading to major breakthroughs in personalized medicine and regenerative medicine. It provides innovative treatment options for a variety of intractable diseases, especially in the treatment of cancer, genetic diseases and immune system diseases. With the continuous development of gene editing technology, cell expansion processes and biomaterials, the cell therapy platform will further optimize the preparation, storage and transportation of cells, and improve the safety and effectiveness of treatment. Despite the technical complexity, high costs and regulatory challenges, the rapid development of the cell therapy platform indicates that it is expected to provide more patients with customized and precise treatment options in the future, pushing the medical field to new

heights.

The global Cell therapy platform market size was estimated at USD 4137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
