Report Overview

A cell voltage monitor is a device for real time monitoring of the cell voltage of lithium-ion batteries, fuel cells, electrolyzers and other energy storages. Relevant measured data are especially aging, stack-inhomogeneity and water content of fuel cells. Dependent on the applied cell voltage monitor the cell temperature can also be determined, which is practical particularly for fuel cell monitoring. By means of its multi-channel construction the cell voltage monitor can control up to several thousands of cell units simultaneously.
