Cellular Distributed Antenna System (Cellular DAS) is an advanced, in-building wireless communication system designed to improve cellular network coverage and capacity within large or challenging environments (e.g., buildings, campuses, underground facilities). It consists of a network of antennas that distribute wireless signals (typically from cellular networks) throughout a building or other enclosed space, ensuring reliable mobile connectivity for voice calls, text messaging, and data services. A Cellular DAS amplifies and redistributes cellular signals to areas with poor reception, addressing issues like dead zones, weak signals, or network congestion caused by the building's physical structure.

The global Cellular DAS market size was estimated at USD 1580.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Cellular DAS market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
