Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cellular Foam Concrete competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global cellular foam concrete production reached approximately 8.6 million tons, with an average global market price of around US\$ 250 per ton. Cellular foam concrete material is a lightweight, free-flowing cementitious material made by incorporating preformed foam into a cement-based mixture, creating a high proportion of stable air voids for improved thermal and acoustic insulation, low density, and controlled strength. This material differs from traditional concrete by replacing dense aggregates with air bubbles, resulting in a significantly lighter and more insulating product.

The global Cellular Foam Concrete market size was estimated at USD 2158.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
