### Report Overview

Cellulose, usually from cotton linters or wood pulp, is processed to make viscose, which is then extruded into clear, tough casings for making wieners and franks. They also are shirred for easier use and can be treated with dye to make 'red hots'. The casing is peeled off after cooking, resulting in 'skinless' franks. Cellulosic viscose solutions are combined with wood or for example abaca pulp to make large diameter fibrous casings for bologna, cotto salami, smoked ham and other products sliced for sandwiches. This type is also permeable to smoke and water vapor. They can be flat or shirred, depending on application, and can be pretreated with smoke, caramel color, or other surface treatments.

The global Cellulose Casings market size was estimated at USD 614 million in 2023 and is projected to reach USD 1082.22 million by 2032, exhibiting a CAGR of 6.50% during the forecast period.
