Abstracts

In dry mortar, cellulose ether plays a role in water retention, thickening, thixotropy, air entraining, and retarding properties. Good water retention ability enables more complete hydration of cement, which can improve the wet viscosity of wet mortar and enhance the bonding strength of mortar. In ceramic tile bonding mortar, it can increase the opening time and adjust the time. Adding cellulose ether to mechanically sprayed mortar can improve its structural strength. Self leveling can prevent settlement, segregation and stratification. Therefore, cellulose ether is widely used as an important additive in dry mortar. In order to fully utilize the application of cellulose ether in dry mixed mortar, it is crucial to choose the appropriate type of cellulose ether and determine its application scope.

The global Cellulose Ether for Mortar market size was estimated at USD 309.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
