Abstracts

Clinker is a nodular material produced in the kilning stage during the production of cement and is used as the binder in many cement products. The lumps or nodules of clinker are usually of diameter 3-25 mm and dark grey in color. It is produced by heating limestone and clay to the point of liquefaction at about 1400°C-1500°C in the rotary kiln. Clinker, when added with gypsum (to control the setting properties of cement and ensure compressive strength) and ground finely, produces cement. Clinker can be stored for long periods of time in a dry condition without degradation of quality, hence it is traded internationally and used by cement manufacturers when raw materials are found to be scarce or unavailable. Global Cement Clinker key players include CNBM, Anhui Conch Cement, LafargeHolcim, HeidelbergCement, Jidong Cement, etc. Global top five manufacturers hold a share over 30%. China is the largest market, with a share about 60%, followed by Southeast Asia, and India, both have a share about 30 percent. In terms of product, Portland Clinker is the largest segment, with a share nearly 90%. And in terms of application, the largest application is Portland Cement, etc.

The global Cement Clinker market size was estimated at USD 80740.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 1.70% during the forecast period.
