Abstracts

The mortar mixing pump is driven by an electric motor, and the main pumping system adopts an open oil circuit, constant power control, and has the dual functions of hydraulic stepless adjustment and manual adjustment of the mortar delivery volume. The stirring system stirs the raw materials into a pumpable shotcrete, which is loaded into the hopper, which can be used as a filler auxiliary device and storage for the pumpable shotcrete transfer pump. The mortar transfer pump consists of two parallel pump cylinders. According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our ?Building Materials Research Institute?, the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.

The global Cement Mortar Mixing Pump market size was estimated at USD 1065.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
