Report Overview

A belt conveyor is a system designed to transport or move physical items like materials, goods, even people from one point to another. Unlike other conveying means that employ chains, spirals, hydraulics, etc., belt conveyors will move the items using a belt. It involves a loop of a flexible material stretched between rollers that are actuated by an electrical motor. As most bulk handling applications, cement industry is a very challenging field due to its critical operating conditions, especially the type and load of the transported material and the complex manufacturing process involving different conveyor systems.
