Report Overview

Cemented Carbide Grade Powder, also known as tungsten carbide powder, is a type of hard metal powder that is widely used in the manufacturing of cutting tools, wear-resistant parts, and other industrial applications. This powder is composed of tungsten carbide (WC) particles, which are embedded in a binder material, typically cobalt (Co). The combination of these two materials results in a product with exceptional hardness, wear resistance, and high compressive strength. Cemented Carbide Grade Powder is produced through a process of powder metallurgy, where the tungsten carbide and cobalt powders are mixed, compacted, and then sintered at high temperatures to form a solid, dense material. The final product is characterized by its fine grain structure, uniform distribution of carbide and binder phases, and high performance properties, making it an essential material in various industries such as aerospace, automotive, and metalworking.
