Abstracts

Cemented carbide plate, also known as tungsten carbide plate or hard metal plate, refers to a composite material manufactured through powder metallurgy processes, primarily composed of tungsten carbide (WC) particles bonded together with a metallic binder, typically cobalt. It is characterized by exceptional hardness, wear resistance, compressive strength, and thermal stability, making it suitable for applications involving extreme abrasion, impact, and high temperatures. These plates are widely utilized across industries such as mining, construction, metalworking, and oil and gas, where they serve as wear parts, cutting tools, wear-resistant liners, and components in machinery subjected to harsh operating conditions. The material's properties can be tailored by adjusting the grain size of the tungsten carbide and the percentage of the binder, allowing for optimization based on specific performance requirements like toughness versus wear resistance.

The global Cemented Carbide Plate market size was estimated at USD 4350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
