Abstracts

The center pull rowing machine is a type of fitness equipment designed to simulate the rowing motion, distinguished by its centrally located handle attachment point that allows for a symmetrical, bilateral pulling action. Unlike traditional side-pull or front-pull rowers, this configuration promotes balanced muscle engagement across the back, shoulders, and arms while reducing the risk of uneven strain or technique-related injuries. It typically incorporates resistance mechanisms such as magnetic, air, or hydraulic systems, and often includes performance tracking features like stroke rate, distance, and calories burned. The machine is valued for its efficient full-body workout, targeting cardiovascular endurance and muscular strength simultaneously, and is commonly used in both home and commercial gym settings for low-impact, high-intensity training.

The global Center Pull Rowing Machine market size was estimated at USD 127.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
