The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Central Coolant Filtration System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Central Coolant Filtration System is a system designed for centralized filtration, purification and recycling of the cooling fluids used in mechanical processing. It collects the cooling fluids from multiple equipment through pipelines and returns them to a processing tank for centralized filtration, automatic slag removal, formula addition, and then the treated cooling fluids are transported back to each equipment by a supply pump. The system can achieve centralized control of the concentration and pH value of the cooling fluid, and has multiple supply and return fluid schemes. It can be equipped with oil-water separation, purification regeneration and automatic replenishment devices to maintain the service life and hygiene of the cooling fluid and the workshop environment over the long term, saving costs and creating a favorable production environment.

The global Central Coolant Filtration System market size was estimated at USD 546.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
