Report Overview:

The satellite flexo printing machine is used to complete the color printing sleeve on the common printing press. As the printed material is pressed to the cylinder, the material's tension changes very little, and the material becomes smaller when it is dry. The machine is compact and the paper route is short. Therefore, it is especially suitable for the printing of thin materials with more difficult control of width and tension, and the overprinting precision is higher than the stack types.

The Global Central Impression Flexographic Printing Press Market Size was estimated at USD 778.84 million in 2023 and is projected to reach USD 1086.18 million by 2029, exhibiting a CAGR of 5.70% during the forecast period.
