Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Central Strength Members (CSM) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Central Strength Members (CSM) production reached approximately 202 k tons, with an average global market price of around US\$2512 per ton. Central Strength Members (CSM) are load-bearing components located at the core of fiber optic cables. Their primary function is to withstand tensile forces and mechanical stresses during installation, operation, and environmental exposure, while maintaining the overall structural stability of the cable. Typical materials include fiber-reinforced plastic (FRP), steel wire, or stranded steel, which offer high strength, low weight, and corrosion resistance. CSM not only enhances tensile and compressive performance but also serves as a reference axis for cable design, ensuring uniform fiber distribution. This significantly improves cable reliability and longevity under diverse operating conditions. The upstream raw materials for Central Strength Members (CSM) include glass fiber, aramid fiber, and resin. Global glass fiber manufacturers include Owens Corning, Jushi Group, Taishan Fiberglass, CIPC, and Vetrotex, resulting in a high degree of market concentration. Global aramid fiber manufacturers include DuPont, Teijin, JSC Kamenskvolokno, Kolon, and Hyosung. Downstream customers for Central Strength Members (CSM) include fiber optic cable manufacturers such as Prysmian, Hengtong Optic-Electric, Furukawa, Corning, and Yangtze Optical Fiber and Cable.

The global Central Strength Members (CSM) market size was estimated at USD 507.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
