Abstracts

High-quality centralized clock generators are designed to produce clock signals with very low jitter (timing variations) and low phase noise. This is important for maintaining signal integrity, reducing errors, and enhancing overall system performance. Some centralized clock generators support spread spectrum clocking to reduce electromagnetic interference (EMI). By slightly modulating the clock frequency, SSC helps systems comply with regulatory requirements for EMI emissions.

The global Centralized Clock Generator market size was estimated at USD 1314.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
