Abstracts

A centralized radio access network (CRAN) is a mobile communications network architecture that centrally deploys baseband processing functions in a data center or computer room, connecting to geographically distributed radio frequency units (RFUs) via a fronthaul network. Compared to traditional distributed architectures, this architecture enables centralized resource scheduling, reduces energy consumption, and improves operational efficiency. It is commonly used in 4G and 5G network construction. Centralized wireless access networks are moving from pilot projects aimed at reducing costs and increasing efficiency for operators to large-scale deployment. The core driving force is the maturity of cloud-native control planes and open fronthaul interfaces, which centralize baseband resources originally dispersed across sites into regional computer rooms or even data centers, achieving software and hardware decoupling, elastic scaling, and energy conservation and consumption reduction. Mainstream equipment vendors are building moats through white-box accelerators, open source protocol stacks, and intelligent scheduling algorithms, while cloud service providers are entering the market with public cloud edge nodes to compete for operational share of RAN-as-a-Service. Operators are more focused on simplifying operations and energy efficiency indicators, and tend to choose proven solutions rather than proof-of-concepts. The industry chain is forming multi-layer collaboration across chips, complete machines, platforms, and services. In the future, the focus of competition will shift to computing power sharing, real-time AI energy conservation, and slice-level SLA guarantees. Manufacturers that are the first to achieve cloud-network-edge collaboration and possess cross-domain resource orchestration capabilities will lock in the continued expansion of open network dividends.

The global Centralized RAN market size was estimated at USD 285.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the
