Abstracts

Centrally Controlled Fire Emergency Lighting and Evacuation Indication System is a specialized safety and protection system designed to provide reliable emergency illumination and dynamic evacuation guidance under fire or other hazardous conditions, with all devices centrally monitored and controlled by a management unit. Unlike independent emergency lighting systems, this centrally controlled system connects emergency luminaires, exit signs, power supply units, and control modules to a central controller through wired or wireless networks, enabling unified supervision, intelligent decision-making, and real-time command. When a fire alarm is triggered, the system automatically switches on emergency lighting and displays evacuation routes through illuminated indicators.

The global Centrally Controlled Fire Emergency Lighting and Evacuation Indication System market size was estimated at USD 1157.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
