Abstracts

A centrifugal bowl feeder is a specialized automated part feeding system that utilizes a vibrating bowl with an interior spiral track to orient and feed small components?such as screws, nuts, or electronic parts?at high speeds to assembly lines or packaging machinery. The bowl rotates rapidly, creating centrifugal force that moves parts along the track, while precisely designed tooling, such as grooves, wipers, or steps, reorients incorrectly positioned items, ensuring only properly aligned components exit through the discharge chute. These devices are valued for their efficiency, reliability, and ability to handle a wide range of part geometries, making them essential in manufacturing sectors like automotive, electronics, pharmaceuticals, and consumer goods, where consistent and rapid part supply is critical.

The global Centrifugal Bowl Feeder market size was estimated at USD 480.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
