Abstracts

Centrifugal turbo blowers are high-speed, direct-drive turbomachinery devices that provide energy-efficient air or gas movement by accelerating air radially outward using an impeller, typically operating at speeds exceeding 10,000 RPM and often incorporating magnetic bearing systems for oil-free, low-maintenance performance; they are distinguished from traditional blowers by their ability to deliver large volumes of air at relatively constant pressure, with advanced models featuring integrated variable frequency drives for precise flow control and significant reductions in energy consumption compared to older technologies like multistage centrifugal or positive displacement blowers.

The global Centrifugal Turbo Blowers market size was estimated at USD 852.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
