Report Overview

Ceramic beads are made of zirconium oxide or zirconium silicate, with addition of aluminium oxide and silica, proportion of which is different in different product types. They may contain some stabilizers, which greatly improve their properties. Particular types of beads have different characteristics and areas of application. Ceramic beads are made from an extremely tough zirconium oxide ceramic. They are iron-free and are therefore suitable for use with stainless steel and aluminium. The round shape of the ceramic beads means that they can be used for non-aggressive cleaning and for producing visually attractive surfaces.
