### Report Overview

A ceramic capacitor is a fixed value capacitor in which ceramic material acts as the dielectric. Ceramics were one of the first materials to be used in the producing of capacitors, as it was a known insulator. It is constructed of two or more alternating layers of ceramic and a metal layer acting as the electrodes. The composition of the ceramic material defines the electrical behavior and therefore applications.

The Ceramic Capacitor markets in China will continue their meteoric rise as long as Japan can fuel the growth at competitive prices. Dominance of China consumption is a key to this strategy; Yageo and Walsin are well positioned for this coming change in the market; but what of the opportunity for domestic Chinese manufacturers such as Feng Hua and EYANG.
