Li-ion Battery Separator is a kind of microporous film which main matrix is polyolefine film, it has manufactured by one-step or two-step stretching in hole craft and had ion pass-through function, in the li-ion battery it has played a role of separate positive pole and negative pole of battery to avoid short circuit. Following the development of technology of separator there has gradually derived some new types of li-ion battery separator, such as PP/PE/PP compound separator, ceramic coating separator resistance to high temperature and PVDF coating separator with high performance. Lithium Battery Ceramic Separator is based on dry, wet and non-woven fabrics, and is coated with inorganic ceramic particle layers (such as high-purity alumina, boehmite, SiO₂, etc.) to prepare composite multi-layer separators. , The ceramic composite separator realizes the performance complementarity between materials, which can meet the needs of new lithium-ion batteries with high safety and high-power rapid charge and discharge. Growth in Electric Vehicle Market: The electric vehicle market is expected to grow significantly in the coming years, driven by environmental concerns, government policies, and technological advancements. Ceramic separators are a key component of lithium-ion batteries used in electric vehicles, providing improved safety and performance. The growth in the electric vehicle market is expected to drive the demand for ceramic separators. Development of Innovative Battery Technologies: The development of innovative battery technologies, such as solid-state batteries, is expected to further enhance the performance and reliability of lithium-ion batteries. Solid-state batteries offer higher energy density, faster charging times, and better safety compared to traditional lithium-ion batteries. The development of these innovative battery technologies is expected to create new opportunities for ceramic separators in various applications. Increased Use in Portable Electronics: Ceramic separators are also used in lithium-ion batteries for portable electronic devices such as smartphones, laptops, and tablets. The demand for these

devices is expected to continue to grow, driving the demand for ceramic separators. Government Policies and Incentives: Government policies and incentives can play a crucial role in promoting the use of ceramic separators in lithium-ion batteries. For example, government subsidies or tax breaks for electric vehicles can encourage more people to switch to electric vehicles, thus driving the demand for ceramic separators. Improved Manufacturing Processes: The development of improved manufacturing processes for ceramic separators can reduce production costs and increase efficiency, making them more competitive with other battery technologies. This is expected to further expand the market for ceramic separators in the coming years.

The global Ceramic Composite Separator market size was estimated at USD 5967.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.10% during the forecast period.
