Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ceramic Corundum Abrasives competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ceramic corundum abrasive (also known as SG abrasive) is an advanced alumina-based abrasive synthesized by sol-gel process. Its microstructure is composed of 50-500 nanometer α -alumina grains densely bonded by ionic bonds. It has no pores and has high hardness, high toughness and excellent self-sharpening properties. Compared with traditional fused corundum, its core advantage lies in the micro-crushing mechanism of nano-scale grains during grinding: after the passivated grains on the surface of the abrasive fall off, the new cutting edge is continuously exposed, which significantly improves the grinding efficiency and prolongs the tool life.

The global Ceramic Corundum Abrasives market size was estimated at USD 352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Ceramic Corundum Abrasives market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
