Abstracts

Dental materials are fabricated materials used in dentistry practices. Dental materials are of different types and they have different characteristics which is related to their intended purpose. Dental restorative material can resume damaged teeth's original form and functioning. The dental restorative material market is driven by the increasing prevalence of dental diseases and the growing demand for aesthetic dental procedures. As the global population ages, the incidence of dental caries and tooth decay rises, leading to a higher demand for restorative materials. Moreover, the rising awareness of oral health and the desire for natural-looking dental restorations fuel the demand for advanced materials that provide both functionality and aesthetics. Additionally, technological advancements in restorative materials, such as the development of resin-based composites and ceramic materials, further stimulate market growth. However, challenges exist, including the high cost of advanced materials, the need for continuous research to improve material properties and longevity, and the varying regulations governing dental products in different regions. Addressing these challenges and providing cost-effective, durable, and biocompatible materials will be essential for the sustained growth of the dental restorative material market.
