Abstracts

A ceramic filter is a device made of ceramics, used for some form of filtering or separation process. Ceramic filters are replacing polymer filters owing to their high mechanical strength as compared to polymeric membranes. In addition, ceramic filtration membranes have a higher cleaning capacity and thus less number of membranes are required to treat the same volume of water as polymer filtration membranes. Superior qualities of ceramic filters are likely to stir up its demand.

The global Ceramic Filter market size was estimated at USD 1339.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
