## Abstracts

Ceramic refractory silicone rubber is a new type of polymer composite fireproof material, with high-temperature silicone rubber (HTV) as the main material. At room temperature, it has the basic characteristics of silicone rubber, such as non-toxic, odorless, high and low temperature resistance, ozone aging resistance, weather aging resistance, excellent electrical insulation performance, and also has good processing performance of ordinary high-temperature silicone rubber compound. Refractory silicone rubber is quickly burned into a hard and complete shell at temperatures of 500-1000 °C, ensuring that wires and cables are not damaged in the event of a fire and providing strong protection for power and communication. Ceramic refractory silicone rubber can replace mica tape as the fire-resistant layer for fire-resistant cables. Especially for medium and low voltage fire-resistant wires and cables, they can not only be used as fire-resistant layers, but also as insulation layers at the same time.

The global Ceramic Fire Resistant Silicone Rubber market size was estimated at USD 88.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
