Abstracts

Fish spine beads are traditionally used as a component in a method of wire insulation. The beads interlock together to provide continuous electrical insulation. These beads are manufactured from a porcelain material as it has excellent thermo-electric properties. Ceramic fish spine beads are concave on one end and convex on the other. When ceramic ball and socket fish spine beads are strung convex to concave, the wire can flex, twist or bend and still maintain the ceramic insulation. Applications are, but not limited to: Insulating bare electrical wire in air or vacuum systems and high temperature heating element wire insulation.

The global Ceramic Fish Spine Beads market size was estimated at USD 282.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
