Abstracts

Ceramic Lined Floating Ball Valve is a device with a spherical closure unit that provides on/off control of flow. The sphere has a port, also known as a bore, through the center. When the valve is positioned such that the bore is aligned in the same direction as the pipeline, it is in open position and fluid can flow through it. When rotated 90 degrees, the bore becomes perpendicular to the flow path, meaning the valve is closed and the fluid cannot pass through. Ceramic lined floating ball valves are specialized industrial valves used in applications that require resistance to corrosive and abrasive fluids. **Corrosion Resistance and Longevity:** Ceramic lining provides excellent corrosion resistance, extending the lifespan of valves in harsh and corrosive environments. Industries dealing with corrosive fluids seek ceramic lined ball valves to enhance longevity and reduce maintenance costs. **Oil and Gas Industry Demand:** The oil and gas industry often deals with corrosive and abrasive fluids. The demand for ceramic lined ball valves is significant in this industry to maintain the integrity of the systems and ensure long-term performance. **Industrial Expansion and Infrastructure Development:** With ongoing industrial expansion and infrastructure development projects globally, the demand for reliable and durable valves, such as ceramic lined floating ball valves, is expected to rise.

The global Ceramic Lined Floating Ball Valve market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
