Report Overview

Denture crown restoration materials are mainly divided into two types: porcelain fused to metal and all ceramic. Zirconia ceramic material is the artificial material closest to the color and luster of normal human teeth. In terms of mechanical properties, zirconia ceramic material is characterized by high compressive strength, hardness, and wear resistance. Compared with alumina ceramic, it shows higher mechanical properties and is widely used. At present, the all ceramic denture materials that are widely used in clinic include zirconia based all ceramic, alumina based all ceramic, Leucite based all ceramic, and Lithium oxide based all ceramic. Among them, zirconia based all ceramic restorations have excellent performance and are currently the most commonly used all ceramic dentures. The commonly used zirconia ceramics in dentistry include: tetragonal zirconia ceramics, zirconia toughened ceramics, partially stabilized zirconia ceramics, and nano zirconia alumina composite ceramics.
