Abstracts

Ceramic Pulley Lagging is a specialized pulley lagging solution that incorporates ceramic tiles into a rubber or polymer backing layer, designed to enhance the performance and longevity of conveyor systems. The ceramic tiles are strategically embedded on the pulley surface to provide superior grip, abrasion resistance, and durability, especially in high-tension or extreme operating conditions. The raised ceramic profiles increase the coefficient of friction between the conveyor belt and the pulley, minimizing slippage and maximizing efficiency.

The global Ceramic Pulley Lagging market size was estimated at USD 899.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
