## Abstracts

Ceramic refractory silicone is a special fireproof material, which is composed of silicone rubber matrix, ceramic filler, flux, reinforcing agent and vulcanizing agent. It has similar performance to ordinary silicone rubber at room temperature, but can form a dense ceramic layer through the reaction of ceramic filler and flux at high temperature, which significantly improves the fire resistance. This material has excellent high temperature resistance, flame retardancy, no molten droplets and non-toxic gas release. It is widely used in the fields of fire prevention, heat insulation and flame retardancy, especially suitable for electrical equipment, building materials and fire protection in high temperature environment.

The global Ceramic Refractory Silicone market size was estimated at USD 1454.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
