Abstracts

Ceramides are the same compounds found in human skin that replenish the skin's lipid barrier, promote turnover and reduce transepidermal water loss. Ceramide AP consists of a phytosphingosine backbone linked to a long-chain ω -hydroxystearic acid (AHA). Due to the presence of alpha-hydroxy acids in its structure, this ceramide has additional appeal for skin care preparations. Like other AHAs, it provides gentle exfoliation, promoting the natural peeling process to reveal an even, smooth, fresh complexion. Due to its gentle action, Ceramide AP is suitable for sensitive skin. It reduces fine lines and wrinkles, eliminates dead and dull cells, and improves barrier function?an ideal ingredient for anti-aging skin care products. Global key players of CeramideAP include Evonik, Sederma (Croda International), NIKKOL GROUP, etc. The top three players hold a share about 64%. Asia-Pacific is the largest market, and has a share about 45%, followed by Europe and North America with share 25% and 21%, separately. In terms of product type, Microbial Fermentation is the largest segment, occupied for a share of 72%. In terms of application, Cosmetic has a share about 77 percent.

The global CeramideAP market size was estimated at USD 65.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
