Report Overview

Refurbishment is the distribution of products, usually electronics and electricals that have been previously returned to a manufacturer or vendor for various reasons, like not sold in the market or new launch of a product. Refurbished products are normally tested for functionality and defects before they are sold to the public. They are repaired by the original manufacturer and resold.

The biggest difference between manufacturer refurbished and seller refurbished products is the price. For the Apple-branded service, you will generally pay more than you would for seller refurbished devices. Even though they may be the exact same quality as a seller refurbished device that has been tested and repaired by a trusted retailer, expect to pay a higher price.
