Abstracts

The cervical arthrodesis plate is a medical implant designed to provide rigid internal fixation and stabilization of the cervical spine following surgical procedures such as spinal fusion, trauma correction, or degenerative disease treatment. Typically constructed from biocompatible materials like titanium or titanium alloys, these plates feature screw holes for secure attachment to vertebral bodies, often with locking mechanisms to prevent screw back-out, and are engineered to maintain alignment, promote bone fusion, and reduce micromotion while accommodating the anatomical curvature and biomechanical demands of the cervical region.

The global Cervical Arthrodesis Plates market size was estimated at USD 146.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
