Report Overview

The cervical cell collector is composed of various materials and types of brushes, handles, sleeves, etc. The product is used for gynecological examination of medical units for cervical cell sampling, cervical endometrial cell collection, and vaginal secretion sampling.

Different types of brush heads designed according to gynecological cervical anatomy can fully touch the inner and outer sides of the cervical cervix and the endometrium, dip the brush head into the cervix or uterus, position the cannula, and rotate the brush rod to make the brush head and the inner and outer cervix. Soft and accurate physical friction is generated around the endometrium and the endothelium. Wipe off the epithelial cells and detect them by cytology and other techniques to achieve early diagnosis of cervical cancer and gynecological diseases.
