Abstracts

An cervical artificial disc (also called a disc replacement, disc prosthesis or spine arthroplasty device) is a device that is implanted into the spine to imitate the functions of a normal disc (carry load and allow motion). Some of the major factors supporting the growth of the artificial disc market include product and technological innovations; increasing incidence of degenerative disc diseases; rising propensity for minimal incision surgeries; better clinical trial results with cervical total disc replacement (C-TDR) compared to anterior cervical discectomy and fusion (ACDF); long-term cost benefits of disc replacement over the spinal fusion procedures; surging geriatric population; and rising healthcare expenditure.

The global Cervical Disc Prosthesis market size was estimated at USD 636.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.50% during the forecast period.
