Abstracts

A cervical vertebra tractor, also known as a cervical traction device, is a therapeutic apparatus designed to alleviate neck pain and related symptoms by applying controlled, longitudinal force to the cervical spine, thereby gently separating the vertebrae, reducing pressure on spinal discs and nerve roots, improving spinal alignment, increasing blood flow, and promoting muscle relaxation. These devices are commonly used in both clinical settings, such as physical therapy and chiropractic offices, and home environments, with variations including manual over-the-door systems, pneumatic inflatable collars, and electronic motorized units that allow users to adjust traction force and duration based on prescribed therapeutic needs.
