Abstracts

Cesium tungsten bronze is a functional compound with special structure of oxygen octahedron, low resistivity and low temperature superconductivity. In recent years, it has been found that cesium tungsten bronze (Cs_xWO_3) has excellent near-infrared shielding properties, which is expected to replace the existing ITO conductive glass as a window material, and can be used as a good near-infrared thermal insulation material, which makes it an ideal choice for thermal insulation materials. When the glass surface is coated with cesium tungsten bronze film, its near-infrared shielding and heat insulation properties will be enhanced with the increase of cesium content. Compared with the blank glass, the glass coated with cesium tungsten bronze film has better thermal insulation performance, and the thermal insulation temperature difference can reach 13.5?.

The global Cesium Tungsten Bronze market size was estimated at USD 53.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
