Abstracts

Cetane number improver, also known as a cetane booster or ignition improver, is a chemical additive specifically designed to enhance the cetane number of diesel fuel, which is a critical indicator of the fuel's ignition quality and combustion efficiency in compression-ignition engines. By improving the cetane rating, these additives reduce ignition delay, promote more complete and smoother combustion, lower engine noise, minimize harmful emissions such as nitrogen oxides (NOx) and particulate matter, and enhance cold-start performance and overall fuel economy. Typically composed of organic compounds such as alkyl nitrates (e.g., 2-ethylhexyl nitrate), peroxides, or nitrites, cetane number improvers are widely used in both on-road and off-road diesel applications, including automotive, marine, industrial, and agricultural sectors, to meet stringent fuel quality standards, comply with environmental regulations, and optimize engine performance and durability.

The global Cetane Number Improver market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
