Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cetylpyridinium Chloride Mouthwash competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of cetylpyridinium chloride mouthwash is 73 million liters, with an average price of US\$9.06 per liter. Cetylpyridinium chloride mouthwash is a mouthwash containing cetylpyridinium chloride (CPC), a cationic quaternary ammonium compound with broad-spectrum antibacterial properties. It effectively reduces plaque formation, prevents gingivitis, and significantly reduces bad breath caused by periodontal disease. Cetylpyridinium chloride mouthwash is commonly used to assist with cleaning and preventing oral problems, but it should not replace brushing and flossing. The upstream supply chain for cetylpyridinium chloride mouthwash primarily includes the pharmaceutical raw material cetylpyridinium chloride (CPC), ethanol, glycerin, menthol, flavors and fragrances, purified water, and packaging materials. Upstream suppliers are primarily pharmaceutical chemical and fragrance companies, with representative companies including Jiangsu Chenguang Pharmaceutical, Zhejiang Huahai Pharmaceutical, Shandong Xinhua Pharmaceutical, IFF, Huabao Pharmaceutical, and Givaudan. Downstream channels include pharmacies, e-commerce, cosmetics chains, and dental clinics. The downstream market primarily focuses on antibacterial, halitosis removal, and postoperative care, with demand coexisting in both hospital and daily oral care markets. The penetration rate of antibacterial mouthwashes has increased significantly, especially in the latter stages of the pandemic. The development trends of cetylpyridinium chloride mouthwashes are manifested in cosmeceuticalization, precision-enhanced formulations, and complex ingredients. Traditional antibacterial products are shifting towards gentle gum protection and long-lasting freshness. Cetylpyridinium chloride, due to its broad-spectrum

antibacterial properties and low irritation profile, is gradually replacing high-irritation formulations such as chlorhexidine and is widely used in both daily and postoperative oral care. Driving factors include rising awareness of oral health, growing demand for breath management, the increasing popularity of antibacterial and gum-protecting products, and the convergence of medical and daily chemical products. Key obstacles include fluctuating raw material prices, stringent product formulation approvals, insufficient consumer awareness of the safety of medicinal ingredients, and the lack of technological barriers for small and medium-sized brands. Furthermore, some markets have strict regulations on the concentration and formulation of cetylpyridinium chloride, complicating the export and registration process. Annual production capacity for a single production line typically ranges from 2,000 to 5,000 tons. Due to mature raw material and filling processes, the cost structure is relatively stable. The gross profit margin for standard cetylpyridinium chloride mouthwashes is approximately 30% to 40%, while mid- to high-end formulas can reach 45% to 50%, and prescription medical products can reach over 55%. The primary cost component is the active ingredient and fragrance formulation, accounting for approximately 60%.

The global Cetylpyridinium Chloride Mouthwash market size was estimated at USD 665.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
