Abstracts

CFRP are composite materials made through infusion of a resin and a carbon fiber reinforcement. They offer high weight savings, increased tensile strength, fatigue resistance, impact resistance and durability which make them ideal for use in diversified industrial applications. CFRP products are increasingly substituting metals in various automotive applications, primarily to reduce fuel consumption. They are used in manufacturing of tennis racquets, aerospace & automotive components, protective helmets, blades for wind turbines, molding compounds, plates for building & construction and imaging equipment structures. These materials can be used as a chemical or water purifier owing to carbon being a powerful absorbent. CFRP products offer higher weight saving and thus a better fuel economy than the traditional materials such as steel and aluminum. Vehicle manufacturers are obliged to reduce the average energy consumption of vehicles, and this goal can be met using lightweight products. In addition, increased demands for eco-friendly and low VOCs products in vehicles enhance the need for CFRP products in automotive industry.

The global CFRP market size was estimated at USD 402.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global CFRP market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
