Report Overview

CFRP are composite materials made through infusion of a resin and a carbon fiber reinforcement. They offer high weight savings, increased tensile strength, fatigue resistance, impact resistance and durability which make them ideal for use in diversified industrial applications. CFRP products are increasingly substituting metals in various automotive applications, primarily to reduce fuel consumption. They are used in manufacturing of tennis racquets, aerospace & automotive components, protective helmets, blades for wind turbines, molding compounds, plates for building & construction and imaging equipment structures. These materials can be used as a chemical or water purifier owing to carbon being a powerful absorbent.
