Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CFRT RV Board competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CFRT RV board is a lightweight and high-strength sandwich panel made of continuous fiber-reinforced thermoplastic composite material (CFRT) for RVs. Its feature is that the panel is composed of continuous fiber reinforced composite materials, and the core material can be foam (such as PET foam) or honeycomb (such as PP honeycomb), which is compounded by hot-melt process without glue. It has the advantages of high strength, light weight, impact resistance, good thermal insulation, waterproof and moisture-proof, and can replace traditional wood, metal or glass steel plate. In 2024, global CFRT RV Board production reached approximately 17.56 M Sq m, with an average global market price of around US\$ 25 per Sq m. A single production line has a production capacity of 300,000 square meters and a gross profit margin of about 30%. Direct material costs account for approximately 70%-80%; manufacturing costs account for approximately 15%-25%; other costs account for approximately 5%-10% of the total cost. Upstream raw materials: PET foam core material, CFRT prepreg tape/sheet, matrix resin, reinforcing fiber. Downstream application areas RV manufacturers: are direct customers. Including self-propelled RV (Type B, C) and trailer-type RV manufacturers. RV modification factory: performs late-stage RV modifications for specific models (such as pickup trucks and trucks).

The global CFRT RV Board market size was estimated at USD 439.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
