Abstracts

CGRP inhibitors are a class of medications that block the activity of calcitonin gene-related peptide (CGRP), a neuropeptide involved in the pathophysiology of migraines. By targeting either the CGRP ligand or its receptor, these drugs prevent the dilation of blood vessels and inflammation associated with migraine attacks. CGRP inhibitors are used primarily for the prevention and acute treatment of migraines and include monoclonal antibodies (e.g., erenumab, fremanezumab, galcanezumab) and small molecule receptor antagonists (gepants). They are generally well tolerated and represent a significant advancement in migraine therapy.
